ABSTRACT: A total of 38 sawfly species (Hymenoptera: Symphyta) were captured in the two years of 2014–2015 in the Sălaj County of Romania. Most of the species are fairly common far and wide in Transylvania.

Keywords: faunistics, Transylvania

INTRODUCTION:

In 2014–2015 a faunistical survey was carried out in Sălaj County (Romania) by the Hungarian Natural History Museum (HNHM) and the "Vasile Goldis" Western University of Arad. All specimens listed here were collected within the framework of this co-operation.

The material was mostly collected in the months of May, June and July, consequently the early and the late species are badly missing from the list below.

The identification was based on Enslin (1918), Móczár *et al.* (1973), and Zombori (1982, 1990, 2016).

Collecting data are given in the list below, following in the main Gubányi's paper about collecting sites published in this volume. Collectors' names are abbreviated in the list as: AGr – Aranka Grabant, AGU – András Gubányi, AK – Attila Kenéz, AO – András Orosz, AP – Attila Podlussány, GP – Gellért Puskás, LR – László Ronkay, MT – Mária Tóth, OM – Ottó Merkl, PS – Péter G. Sulyán, VSz – Viktória Szőke, ZE – Zoltán P. Erőss, ZS – Zoltán Soltész, ZV – Zoltán Vas.

All specimens are deposited in the HNHM Hymenoptera Collection.

The identification of this small number of a meagre 38 species resulted only in a few interesting species, like *Empria baltica*, *Tenthredopsis tischbeinii*, *Cephus*

infuscatus and *C. runcator*, although neither of them is a great rarity in Transylvania.

CONCLUSIONS:

To concentrate on the fauna of a specific territory of any country is a good adventure. It would be advisable to make further collectings in the Sălaj County, too. If it is granted perhaps the early months and those of late summer and autumn should also be included in the future ventures.

ACKNOWLEDGEMENTS:

I would specially like to thank Zoltán Vas (curator of Hymenoptera Collection, Hungarian Natural History Museum) for his boundless patience in preparing and meticulously checking the manuscript form and helping in many ways. My grateful thanks are due to Tamás Németh (Coleoptera Collection, Hungarian Natural History Museum) for making the excellent photograph of a teratologically disfigured labrum of a sawfly specimen.
