ABSTRACT: In 2014–2015 a faunistical survey was carried out in Sălaj County, Romania by the Hungarian Natural History Museum in co-operation with the "Vasile Goldiș" Western University of Arad. Here we report the results of the following aculeate wasp and ant families: Chrysididae (5 species), Dryinidae (2 species), Embolemidae (1 species), Sapygiidae (1 species), Mutillidae (2 species), Scoliidae (1 species), Tiphidae (2 species), Formicidae (28 species), Pompilidae (5 species), Vespidae (10 species), Sphecidae (2 species), and Crabronidae (14 species). In total, 73 species were recorded.

Keywords: faunistics, Chrysidoidea, Vespoidea, Apoidea, Spheciformes

INTRODUCTION:

In 2014–2015 a faunistical survey was carried out in Sălaj County (Romania) by the Hungarian Natural History Museum (HNHM) in co-operation with the "Vasile Goldiș" Western University of Arad. All specimens reported here were collected within the framework of this co-operation.

Aculeate Hymenoptera represent many of the best studied groups of the order (such as social wasps and ants) in the European fauna (see e.g. Gauld *et al.*, 1988). However, as most of the collectings in Sălaj County were done by non-specialists of Hymenoptera, relatively few specimens were collected. Aculeate wasps are usually good flying, active insects armoured with a sting; hence in general it is neither easy nor favoured to collect them.

In this paper we report the results regarding the aculeate wasps and ants (Chrysidoidea, Vespoidea, Apoidea: Spheciformes), excluding the bees (Apoidea: Apiformes). The terms Spheciformes and Apiformes, although the former does not represent a monophyletic category, are used in this paper following Goulet *et al.* (1993) to emphasize the distinction between the apoid (once called "sphecid") wasps and the bees.

MATERIALS AND METHODS:

Embolemidae, Sapygiidae, Scoliidae, Tiphidae, Pompilidae, Vespidae, Sphecidae and Crabronidae were identified by the first author, Dryinidae and Formicidae by the second author, Chrysididae and Mutillidae by the third author. It is also indicated in the list after each family name. A few *Temnothorax* and *Tetramorium* (Formicidae) specimens have been identified to genus-level only, hence they are not included in the list of species below. All specimens are deposited in the HNMH Hymenoptera Collection.

Taxonomy and nomenclature follow Goulet *et al.* (1993) and the Fauna Europaea database (Yong *et al.*, 2014). Superfamilies, families, genera, and species are ordered alphabetically. Collecting numbers, localities and dates are given in the list below, following in the main Gubányi (2015). Collectors' names are abbreviated in the list as: AGr – Aranka Grabant, AGU – András Gubányi, AK – Attila Kenéz, AO – András

Orosz, AP – Attila Podlussány, CsK – Csaba Kutasi, DM – Dávid Murányi, GK – Gergely P. Katona, GP – Gellért Puskás, LD – László Dányi, LR – László Ronkay, MT – Mária Tóth, OM – Ottó Merkl, PS – Péter G. Sulyán, VSz – Viktória Szőke, ZE – Zoltán P. Erőss, ZS – Zoltán Soltész, ZV – Zoltán Vas, ZsB – Zsolt Bálint. The abbreviation "w" in the list means the worker caste of eusocial species ("ww" in plural form).

RESULTS AND DISCUSSION:

Below we list the aculeate wasp and ant species recorded from Sălaj County in 2014–2015. The majority of the reported species are common and widespread species in Europe. A few rare species have also been found; in their cases, some remarks are given following the collecting data.

CONCLUSIONS:

During the faunistical survey of HNHM in Sălaj County 45 species of aculeate wasps and 28 ant species were recorded. They mainly represent the common and widespread species; however, a few rare species were also found. As compared to the known species richness of aculeate wasps and ants in Central and Eastern Europe, the fauna of Sălaj County is still considered poorly known regarding the taxa examined in this paper.

ACKNOWLEDGEMENTS:

We are grateful to all collectors for collecting Hymenoptera specimens during their field trips. We thank Jutka Domonkos for her help in compiling the taxon list.
